

## Appendix B

### Nicor Gas Energy Efficiency Program - Plan Year 2023

Quarterly Report: Third Quarter (July 1, 2023 - September 30, 2023)

#### Response to Evaluators' Recommendations

Program	PY	Recommendation	Action Completion Date	Action(s) Taken
SF IE Retrofits, SF IE IHWAP	2022	Include a Total Gross Annual Therms Savings field for each project in the Nicor Gas tracking data.	7/1/2023	Nicor Gas in collaboration with the utility partners updated the cost allocation methodology to ensure therm savings being reported are the total gross therm savings per measure.
HEER	2022	Measure: Advanced Thermostats Populate the "Residential Building Type" field in the tracking data and use it to determine household factor for advanced thermostats. Ensure SF thermostats use a household factor of 100%, and MF thermostats use a household factor of 65%.	7/15/2023	Nicor Gas updated the data tracking process and added additional QA/QC checks to ensure accurate input factors are being utilized for the savings algorithms.
HEER	2022	Measure: Advanced Thermostats Ensure all advanced thermostat with programmable baseline use a heating reduction value of 7.1% and advanced thermostat with unknown baseline with heating reduction value of 8.5%.	7/15/2023	Nicor Gas updated the data tracking process and added additional QA/QC checks to ensure accurate input factors are being utilized for the savings algorithms.
HEER	2022	Measure: Tankless Water Heater Review the tracking system inputs and ensure actual values and deemed TRM inputs listed in the tracking data are used in the ex-ante savings calculation.	7/15/2023	Nicor Gas updated the data tracking process and added additional QA/QC checks to ensure accurate input factors are being utilized for the savings algorithms.
