Re: Recommended NTGRs for PY8 Multifamily

As part of the evaluation planning process, the evaluation team identified an error in the final NTG recommendations provided to the SAG. In particular, two updates are needed to the gas NTGRs for the Multifamily Program (in-unit component). The following table presents the corrected NTGRs that should be included in the recommendations document. An updated Excel file is also attached to this memo.

Table 1. Multifamily Gas NTGRs for Application in PY8

Component	Measure	Free-Ridership	Gas Participant SO	Gas NTGR (1-FR +SO)
In-Unit	CFLs	0.11	0.00	N/A
	Programmable Thermostats	0.02	0.00	0.98
	Faucet Aerators	0.00	0.00	1.00
	Low-Flow Shower Heads	0.06	0.00	0.94

The evaluation team plans to use the values presented in Table 1 to determine the program’s PY8 net impacts. We will include these values in the detailed PY8 evaluation plan.
